

Information on the disposal of electrical equipment and batteries

OneStop Pro Software Solutions GmbH is not the manufacturer of this product and is not obliged to accept returned electrical equipment or batteries in its capacity as a dealer either. The electrical equipment is manufactured by UAB TELTONIKA TELEMATICS (WEEE no. 29661125), which is represented in Germany by get-e-right GmbH.

Nevertheless, we would like to take this opportunity to give you some information on disposing of electrical and electronic equipment and used batteries (including rechargeable ones).

Information on the German Electrical and Electronic Equipment Act (ElektroG)

The ElektroG is geared primarily towards preventing waste caused by electrical and electronic equipment. Making preparations to re-use this waste, i.e. recycle it or process it by other means, is also intended to reduce the amount of waste needing to be eliminated.

Households are obliged to dispose of waste electrical and electronic equipment separately to their general waste in order to ensure that it is disposed of sustainably and correctly. The equipment affected is labelled with the symbol of a crossed-out wheelie bin:

Waste electrical and electronic equipment must be taken to the correct collection and return points so that they can be separated from unsorted household waste. Correct disposal and/or recycling prevents a negative impact on the environment.

Note in accordance with the German Batteries Act (BattG)

Batteries (including rechargeable ones) must not be disposed of in household waste. You are legally obliged to return them after use. You can hand used batteries in to the correct collection and return points free of charge.

Batteries and rechargeable batteries bear the following symbol:

This indicates that they must not be thrown away with household waste. Batteries that contain over 0.0005 per cent mercury by weight, over 0.002 per cent cadmium or over 0.004 per cent lead will show the chemical symbol of the relevant hazardous substance used in them underneath the wheelie bin symbol – “Cd” for cadmium, “Pb” for lead and “Hg” for mercury.
